Wed, 31 Oct 2018 22:56:00 GMT Circle Geometry - school-maths.com - Chord " a segment whose endpoints are points on the circle. Secant " a line that intersects a circle in two points. Tangent " a line in the plane of a circle that

intersects the circle in exactly one point. Concentric circles " coplanar circles that have a common center. Some real life examples are targets and Target. Tue, 13 Nov 2018 14:56:00 GMT Geometry Unit 10 " Notes Circles - RPDP - A tangent segment is a segment that is tangent to a circle at an endpoint. A secant segment is a segment that contains a chord of a circle and has exactly one endpoint outside the circle. The part of a secant segment that is outside the circle is called an external segment. int_math2_pe_1006.indd 615 1/30/15 11:58 AM Sat, 10 Nov 2018 10:34:00 GMT 10.6 Segment Relationships in Circles - Ms. Raymondachs math - A circle forms a curve with a definite length, called the circumference, and it encloses a definite area. The similarity of any two circles is the basis of the definition of π , the ratio of the circumference and the diameter of any circle. We saw in the module, The Circles that if a circle has radius r , then Tue, 13 Nov 2018 03:57:00 GMT CCI - AMSI - Circle-The set of points in a plane equidistant from a given point(the center of the circle).
